2. [Clever programmer](#) 8hr posted 1year ago
3. [Traversy media](#) 1hr 40mins posted 2years ago
4. [Programming with mosh](#) 48mins 2years ago

Tips -

- 1 . All of the resources and links are of youtubers that I watch and have learned a lot from all of them .All of them are great but follow the course of the YouTuber whose styling of teaching you like the most. (Programming with mosh is my recommendation for beginners)
2. If your are starting out pick the courses of shortest duration so that you don't end up quitting in between.
3. Try to finish what you start.
4. Always follow along the tutorials and try on your own computer.
5. All of the course teach the same things but more duration = more topics covered

Note - There are a lots of other resources that you can get on the internet . I have listed only a handful of them. Don't worry if a course is 2 or 3 year old , it is still valid today .
